

Research Study for People with Quadriplegia

If you have either limited or no use of your hands...

You may be able to participate in an FDA regulated research study to evaluate a new technology which may allow an individual with quadriplegia to control a computer cursor and assistive devices, like a robotic arm, by thought.

This is a safety study.

This study is invasive and requires surgery.

For Individuals with Spinal Cord Injury, Brainstem Stroke, Muscular Dystrophy, or ALS

You must live within 3 hours of one of our study sites in Boston, MA, Providence, RI, Cleveland, OH, or Stanford/Palo Alto, CA.

Can the Brain Move a Computer Cursor by Thought?
